1 About These Instructions

These operating instructions describe the structure, functions and the use of the product and will help you to operate the product as intended. Read these instructions carefully before using the product. This is to avoid possible damage to persons, property or the device. Retain the instructions for future use during the service life of the product. If the product is passed on, pass on these instructions as well.

1.1 Target groups

These instructions are aimed at qualified personal and must be carefully read by anyone mounting, commissioning, operating, maintaining, dismantling or disposing of the device.

1.2 Explanation of symbols used

The following symbols are used in these instructions:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER</td>
<td>DANGER indicates a dangerous situation with high risk of death or severe injury if not avoided.</td>
</tr>
<tr>
<td>WARNING</td>
<td>WARNING indicates a dangerous situation with medium risk of death or severe injury if not avoided.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>CAUTION indicates a dangerous situation of medium risk which may result in minor or moderate injury if not avoided.</td>
</tr>
<tr>
<td>NOTICE</td>
<td>NOTICE indicates a situation which may lead to property damage if not avoided.</td>
</tr>
<tr>
<td>NOTE</td>
<td>NOTE indicates tips, recommendations and useful information on specific actions and facts. The notes simplify your work and help you to avoid additional work.</td>
</tr>
<tr>
<td>CALL TO ACTION</td>
<td>This symbol denotes actions that the user must carry out.</td>
</tr>
<tr>
<td>RESULTS OF ACTION</td>
<td>This symbol denotes relevant results of actions.</td>
</tr>
</tbody>
</table>

1.3 Other documents

Besides this document the following material can be found on the Internet at www.turck.com:
- Data sheet
- Quick-Start Guide

1.4 Feedback about these instructions

We make every effort to ensure that these instructions are as informative and as clear as possible. If you have any suggestions for improving the design or if some information is missing in the document, please send your suggestions to techdoc@turck.com.
2 Information About the Product

2.1 Product identification

These instructions apply to the following encoders with incremental output:
- REI…

2.2 Scope of delivery

- Encoder – sensor
- Quick-Start Guide

2.3 Legal requirements

The devices are subject to the following EU directives:
- 2014/30/EU (electromagnetic compatibility)
- 2011/65/EU (RoHS Directive)
- 2012/65/EU (WEEE II)

2.4 Manufacturer and service

Hans Turck GmbH & Co. KG
Witzlebenstraße 7
45472 Muelheim an der Ruhr
Germany

Turck supports you with your projects, from initial analysis to the commissioning of your application. The Turck product database contains software tools for programming, configuration or commissioning, data sheets and CAD files in numerous export formats. You can access the product database at the following address: www.turck.de/products
For further inquiries in Germany contact the Sales and Service Team on:

- Sales: +49 208 4952-380
- Technology: +49 208 4952-390

Outside Germany, please contact your local Turck representative.
3  For Your Safety

The product is designed according to state-of-the-art technology. However, residual risks still exist. Observe the following warnings and safety notices to prevent damage to persons and property. Turck accepts no liability for damage caused by failure to observe these warning and safety notices.

3.1  Intended use

These devices are designed solely for use in industrial areas. The encoders with incremental output are used to measure angular movements. To do this, the devices record mechanical rotary movements and convert them into electrical pulse sequences. A defined number of pulses is output per revolution. The devices may only be used as described in these instructions. Any other use is not in accordance with the intended use. Turck accepts no liability for any resulting damage.

3.2  Obvious misuse

- The devices are not safety components and must not be used for personal or property protection.
- Any use that exceeds the maximum permissible mechanical speed (see technical data) is deemed to be not in accordance with the intended purpose.

3.3  General safety notes

- The device only meets the EMC requirements for industrial areas and is not suitable for use in residential areas.
- The device may only be assembled, installed, operated, parameterized and maintained by professionally-trained personnel.
- The device may only be used in accordance with applicable national and international regulations, standards and laws.
- If safe operation is no longer guaranteed: Take the device out of operation and ensure that it cannot be switched on again accidentally.
4 Product Description

The encoders of the REI… product series are available as versions with a solid shaft or hollow shaft. The devices are available in three sizes ranging from 36 to 100 mm, in all common resolutions.

The incremental encoders emit electrical pulses that can be used to determine position and calculate speed.

4.1 Device overview

Fig. 1: Example - encoder with hollow shaft  Fig. 2: Example - encoder with solid shaft

4.2 Operating principle

Encoders detect rotational movements, e.g. the angular velocity of a shaft. The encoders convert these rotational movements into electrical signals. The devices pass these electrical signals on to a higher-level controller for evaluation. A distinction is made between absolute and incremental encoders, designed as hollow shaft or solid shaft devices.

Absolute encoders output the same angular value after being switched off and switched on again, even if a change occurs while they are switched off. Incremental encoders only detect position changes while they are in an active state, by counting periodic patterns. A typical method used for this purpose is the optical scanning of a rotating disk.
4.3 Functions and operating modes

4.3.1 Output function

The output signal of the incremental encoder is based on the HTL (high transistor logic) interface or the TTL (transistor-transistor logic) interface. Depending on the model, the inverted signals A (inverse) and B (inverse) are output in addition to tracks A and B. A Z-track is also available.

The half-period of the signal is inversely proportional to the rotational speed. The angle for positioning is captured accurately using the number of output pulses.

The number of output pulses varies depending on the device type.

For evaluation of the output signal, Turck recommends using standard input cards or counter blocks that can process a minimum pulse frequency of 80 kHz.

4.4 Technical accessories

NOTICE
Incorrect mounting
Risk of damage to the sensor

- Do not modify or disassemble the encoder.
- Do not make adjustments to the shaft after mounting.
- Do not use a hammer to align the device.
- Avoid impact loads.
- Load the encoder shaft only within the permissible values (see technical data).
- Do not rigidly connect the rotary encoder to shafts and flanges at the same time.
Use the coupling between the drive shaft and the encoder shaft or the hollow shaft encoder flange.

Fig. 3: Mounting view – Do not open
Fig. 4: Mounting view – Do not make adjustments after mounting
Fig. 5: Mounting view – Do not use a hammer to align the device
Fig. 6: Mounting view – Do not rigidly connect the device to shafts and flanges at the same time
5.1 Mounting the solid shaft encoder using a coupling

- Check shaft for displacement.
- Refer to the technical data for the coupling for the maximum axial displacement, radial displacement, and angular displacement values.

![Fig. 7: Axial displacement](image1)

![Fig. 8: Radial displacement](image2)

![Fig. 9: Angular displacement](image3)

- During mounting, protect the coupling against excessive bending and damage.
- Align the coupling on the shaft.
- Secure the coupling on the device using tensioning screws or clamping screws. For the maximum tightening torque, refer to the data sheet of the screws used.
5.2 Mounting the hollow shaft encoder using a coupling

- Mount the encoder with the coupling on the shaft.

Fig. 10: Mounting on the shaft with the coupling

- Screw the coupling to the drive flange.

Fig. 11: Screwing the coupling to the drive flange

- Carefully tighten the clamping hub.

Fig. 12: Tightening the clamping hub
6 Connection

The encoder has a 5-pin or 8-pin M12 × 1 male connector with incremental output. The pin assignment can be found on the sensor label or the data sheet.

Turck recommends the following cable lengths:
- For asymmetrical transmission (no inverted signals): max. 10 m
- For symmetrical transmission (e.g. RS422 standard): max. 50 m with twisted pairs

- Connect all required cable cores as per the wiring diagram. Insulate the cable ends that are not required to avoid short circuits.
- Follow the operating instructions for the connecting cable used.
- Disconnect the encoder from the connecting cable only when the encoder is de-energized.
- Connect the shielding (if present) to the encoder housing.
- The encoder and processor must always be switched on and off simultaneously.
- Observe the operating voltage and maximum permissible output current (see technical data).

EMC-compliant installation

- Use shielded connection cables as control cables.
- For symmetrical transmission (e.g. via RS422): Use twisted pair cables.
- Connect protective earth to the rotary encoder and the evaluation unit (low impedance).
- Route the connection cables separately from cables with high noise levels.
- Do not connect devices with high noise levels to the encoder’s power supply (e.g. frequency converters, solenoid valves, or contactors), or ensure that suitable voltage filtering is in place.

6.1 Wiring diagram

![Wiring Diagram](image)

Fig. 13: Encoder REI... – wiring diagram
7 Commissioning

After connecting and switching on the power supply, the device is automatically ready for operation.
8 Troubleshooting

If the device does not function as expected, first check whether ambient interference is present. If there is no ambient interference present, check the connections of the device for faults. If there are no faults, there is a device malfunction. In this case, decommission the device and replace it with a new device of the same type.
9 Maintenance

Ensure that the plug connections and cables are always in good condition.
The devices are maintenance-free, clean dry if required.

10 Repair

The device must not be repaired by the user. The device must be decommissioned if it is faulty.
Observe our return acceptance conditions when returning the device to Turck.

10.1 Returning devices

Returns to Turck can only be accepted if the device has been equipped with a Decontamination declaration enclosed. The decontamination declaration can be downloaded from https://www.turck.de/en/retoure-service-6079.php and must be completely filled in, and affixed securely and weather-proof to the outside of the packaging.

11 Disposal

The devices must be disposed of correctly and must not be included in normal household garbage.
Over 30 subsidiaries and over 60 representations worldwide!
